Introduction

Welcome to **Ultimate Power** for U-he Hive. 80 brand new presets designed for modern dance music styles including EDM, Techno, House, Trance, Trap and beyond!

Each preset has been carefully created and tested with the goal of providing you with a collection of inspiring and usable sounds that will work straight out the box. All presets have been level matched and Pitch and Mod wheels have been assigned. Many presets feature complex modulations and make good use of Aftertouch for expressive playing and control.

Included are 30 Synth presets which form the bulk of this sound bank, including massive, wide Supersaw Stacks, beautiful Keys and Plucks, cutting digital Leads, classic rave synths and totally unique, never before heard sounds!

The 20 Bass presets range from classic analogue squares and subs to punchy club plucks and modern sidechained saws. Each Bass has been equalised and compressed to give a deep and solid low end.

10 huge Pads really showcase the power of Hives extensive modulation routings with beautiful, deep Pads and Strings which are full of movement and life. 10 Sequences and Arpeggios will have you creating riffs in seconds and feature acid type sequences, plucky melodies and full on Trance Arps.

To add the finishing touches to your tracks, we have included 10 creative Sound Effects, including impacts, noise sweeps, pitch risers, sirens and more!

Installation

Installing this Hive sound bank is easy. Simply download the Zip file and unpack. You can move the folder named “Ultimate Power” to your Hive “User” folder.

The sound bank will be available from the Directory list in Hives preset browser.

Click the Ultimate Power sound bank from the Directory list to show all presets in this sound bank.

Please note: Requires u-he HIVE 1.0 or later

Features

- 80 modern dance music presets
- 30 example midi files
- Presets categorized by type for easy searching
- Includes Basses, Leads, Pads, Synths, FX and Sequences

- Extensive modulation routings
- Pitchwheel and Modwheel assigned on each patch
- Aftertouch mapping for expressive playing and control

Tips for use

The majority of these presets have Modwheel and Aftertouch (pressure) assigned to multiple parameters. Some presets have the Pitchwheel set to control other parameters than pitch.

It is recommended to try using Aftertouch on each preset as the complex modulations can vastly change the sound from subtle vibrato and filtering to extreme distortion and effects!

Try automating the Aftertouch from your DAW or assigning a hardware controller to it.

Patch List

BA = Basses (some Chords too)
FX = Sound Effects
PA = Pads and Strings
SE = Sequences and Arpeggios
